

PPO Serve

BETTER CARE • IMPROVED VALUE • INSPIRED TEAMS

The Potential Role of the SA Private Healthcare system in a Universal Health Care system in SA

Dr Brian Ruff
March 2025

Dr Brian Ruff experience relevant to this talk

- **Wits MBBCh graduate 1983:** student politics SRC / MRC; NAMDA
- **Early work 1984 - 88:** SHO NHS in London; MO Alexandra Clinic
- **Specialisation:** Internal Medicine **89 - 92** / Rheumatology **95**
- **Transitional arrangement 93/4** PWV Task Team / Gauteng; **95/6** Hospital Strategy Project – rationalize post apartheid service - “**Levels of Care**”
- **UCT HEU 96** – post grad diploma healthcare finance, economics
- **Gauteng Health Department 96 – 98** Technical Task Team -- **Case Mix need clear**
- Treasury x 2 months
- **Clinical Risk Management Discovery Health 1999 – 2015:** : **Case Mix tools (DRGs/Episode Grouper)** – system performance analysis & alternative reimbursement contracts; Hospital Rating Index; **Health Economic model**; Care Coordination project with sub acute hospitals.
- **PPO Serve since 2015: Multi Disciplinary Teams (MDTs) contract case mix risk adjusted capitation + VBC fee - leverage rare medical skills with Care Coordination to navigate the system - match case mix to LOC:**
 - **The Value Care Team 2019 to present:** stronger PHC reduces avoidable admissions – GEMS contract
 - **The Birthing Team with Netcare & JMH:** O&G, midwives - CS rate reduced to 20% (closed 2021)
 - **The GP Care Cell with GHD:** GP Practices screen working poor for HIV, initiate and manage Rx (closed 2022)

Convergence to UHC – how do we achieve this?

Issue:

SA has 2 profoundly dysfunctional parallel healthcare systems:

- **public sector:** very poorly managed (mostly) - low productivity, poor quality
- **private sector:** hugely wasteful, inefficient - monopoly companies serve shareholders before patients (both demand & supply side) – very high % healthcare resources for small / shrinking % population

Healthcare systems mirror society:

- cannot ignore our profound income inequality
- but recognise unequal healthcare access perpetuates inequality

Solution: reform the value from both **towards convergence** – blur the differences, while economic parity improves.

Balanced vs. Skewed access system

			Adult Care	Child Care	Maternity Care	Total
			77%	20%	3%	100%
Facility type	Visit Mix	Case Mix Index	PLPM	PLPM	PLPM	Total PLPM
Central tertiary hospital	10%	2.4	314	82	12	Planned Match
Regional hospital	20%	1.3	340	88	13	
Local hospital	30%	1	393	102	15	
PHC	40%	0.5	262	68	10	
TOTAL	100%	1	1,309	340	51	1,700

PLPM = per life per month cost

Match demand and supply: is critical to achieve value when planning and managing the healthcare system i.e. – that the **patient's problem** is managed at the **right time** and at the **appropriate level and cost**

Data for illustrative purposes only

Horizontal Silos In Public Sector

			Adult Care	Child Care	Maternity Care	Total
			77%	20%	3%	100%
Facility type	Visit Mix	Case Mix Index	PLPM	PLPM	PLPM	Total PLPM
Central tertiary hospital	10%	2.4	314	82	12	Planned Match
Regional hospital	20%	1.3	340	88	13	
Local hospital	30%	1	393	102	15	
PHC	40%	0.5	262	68	10	
TOTAL	100%	1.00	1,309	340	51	1,700
Central tertiary hospital	10%	1.50	314	82	12	Blocked match
Regional hospital	20%	1.15	340	88	13	
Local hospital	30%	1.00	393	102	15	
PHC	40%	0.80	262	68	10	
TOTAL	100%	1.00	1,309	340	51	1,700

Budgets, management follow Levels of Care (LoC) - not patients =

- **Well resourced tertiary hospitals:** spend linked to service & **low CMI** under used, = **poor Value**
- **Sick, high case mix patients** stuck at PHC level = **poor Quality**

Data for illustrative purposes only

Skewed access in the SA Private sector.....

			Adult Care	Child Care	Maternity Care	Total
			77%	20%	3%	100%
Facility type	Visit Mix	Case Mix Index	PLPM	PLPM	PLPM	Total PLPM
Central tertiary hospital	10%	2.4	314	82	12	Planned Match
Regional hospital	20%	1.3	340	88	13	
Local hospital	30%	1	393	102	15	
PHC	40%	0.5	262	68	10	
TOTAL	100%	1	1,309	340	51	1,700
Central tertiary hospital	30%	2.4	942	102	15	Skewed match
Regional hospital	30%	1.3	511	102	15	
Local hospital	30%	1	393	102	15	
PHC	10%	0.5	65	34	5	
TOTAL	100%	1	1,911	340	51	2,302
						135%

Unplanned hospicentric system: excess beds, FFS =overservicing + lone clinician

Wrong case mix match & spend follows patient => misallocation of resources = huge waste, poor value

=> current Administrator / Scheme model is failing

Data for illustrative purposes only

System management philosophy: Budget Control vs. Strategic Purchasing

Control: compliance with form:

- **Fixed** staff structures, fixed budget, rigid protocols & SOPs
- **No system outcomes:** gross adverse events only
- **Credentialing** but no accountability
- **IT systems/data** for control, not for clinical support nor performance measure
- **Disease guidelines**, not patient management

Value Based Care contracts:

- **Flexible**, responds to incentives; discretionary guidelines to achieve outcomes
- **Cohort Case Mix linked guidelines** for similarly complex patients with IT systems
- **Outcome measures case mix adjusted:** population 'disease burden index' / hospital DRG
- **Accountability for outcome scores**
=> drives iterative efficacy/ efficiency

Private Sector issues

The NHI road to UHC - Purchaser vs. Provider split (WHO):

Health Market Inquiry lesson: need high functional **Purchaser vs. Provider** system - **competent purchasers vs. competitive suppliers.**

The current private sector has neither – static, increasing costs:

Purchasers - Monopsony Administrators:

- **For profit TPAs** control 'not for profit' medical schemes – committed to FFS system => fragments care, overservicing, waste
- **TPA MCO licenses:** award themselves scheme care services contracts – perverse vertical contracts x2 profits; kills innovation

CoMS ineffective re Schemes not purchasing effectively

Will NHI be more effective as a purchaser?

Private Sector issues

Providers: Hospicentric system

Monopoly Hospitals

- 3 groups 94% bed days + region domination => no competition, little innovation
- Rich hospital PMBs 70 – 80% total scheme spend hospital campus

Neglected marginalized PHC system

- Poorly funded (GPs 4,5% - no OH PMBs); FFS funded 1 – 2 person GP Practices lack scale for efficacy; cannot compete with specialists for limited OH funds; Allieds absent in townships

No regulation for provider supply levels nor performance review

Can the NHI effectively commission system reengineering?

The PPO Serve 'Value Care Team' Solution – GEMS Population Medicine benefit:

The VCT is a Multi Disciplinary Team - integrates & strengthens Primary Health Care service to do **proactive patient care** - to reach out beyond the clinic between visits to optimise care and support patient needs:

- **GP practices:** a local cluster of GP practices at **the core** - working with a Physician, and with...
- **MDT “support” clinical team:** a **Coach** manages a group of **Care Coordinators, Allied associates, palliative care & social partners** to support the practice patients
- **MDT meetings** held regularly to review cases; update Rx policies & adopt joint VBC Team projects

- *Coach = the 'Practice Transformation Coach'*
- *Care Coordinators are Nurses or Clinical Associates*

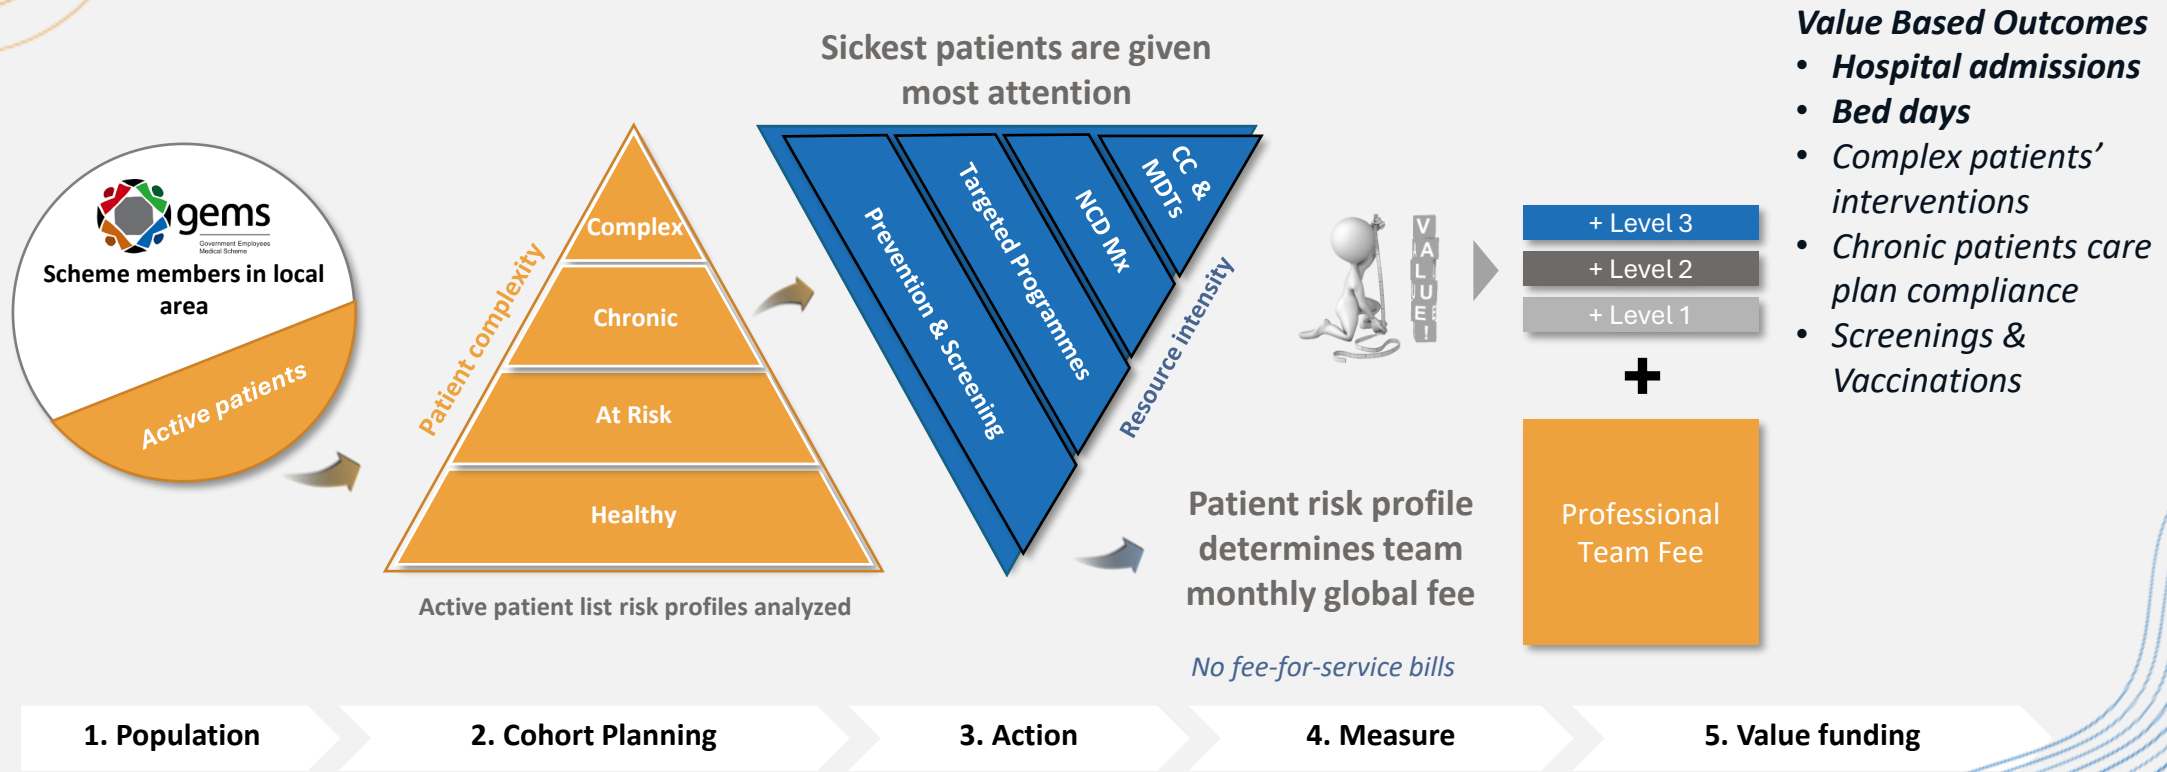

The Value Care Team

Functional Case Mix Model:

Match patient severity cohorts with intensity of services

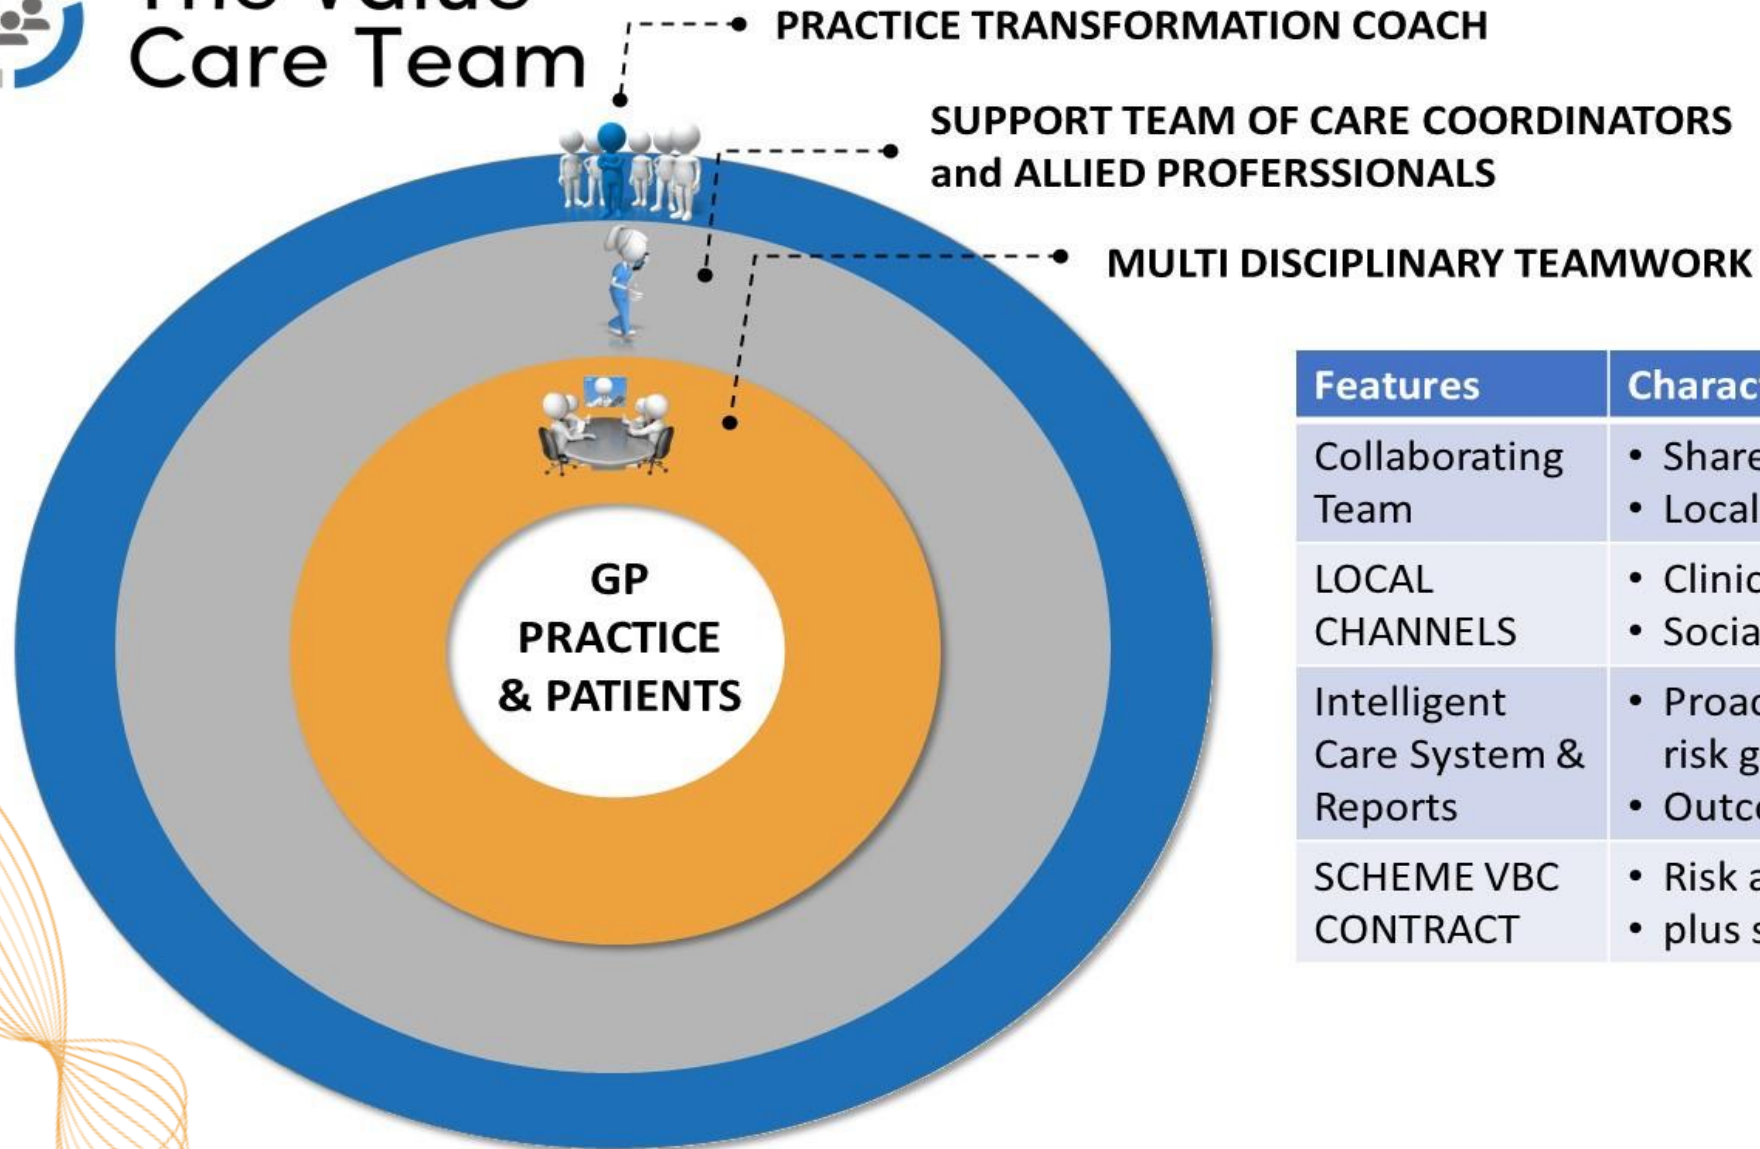

Link patient need with service provision

Focus is on stronger PHC role & funding, diminish hospital dependence

The Multidisciplinary Team Delivery Model

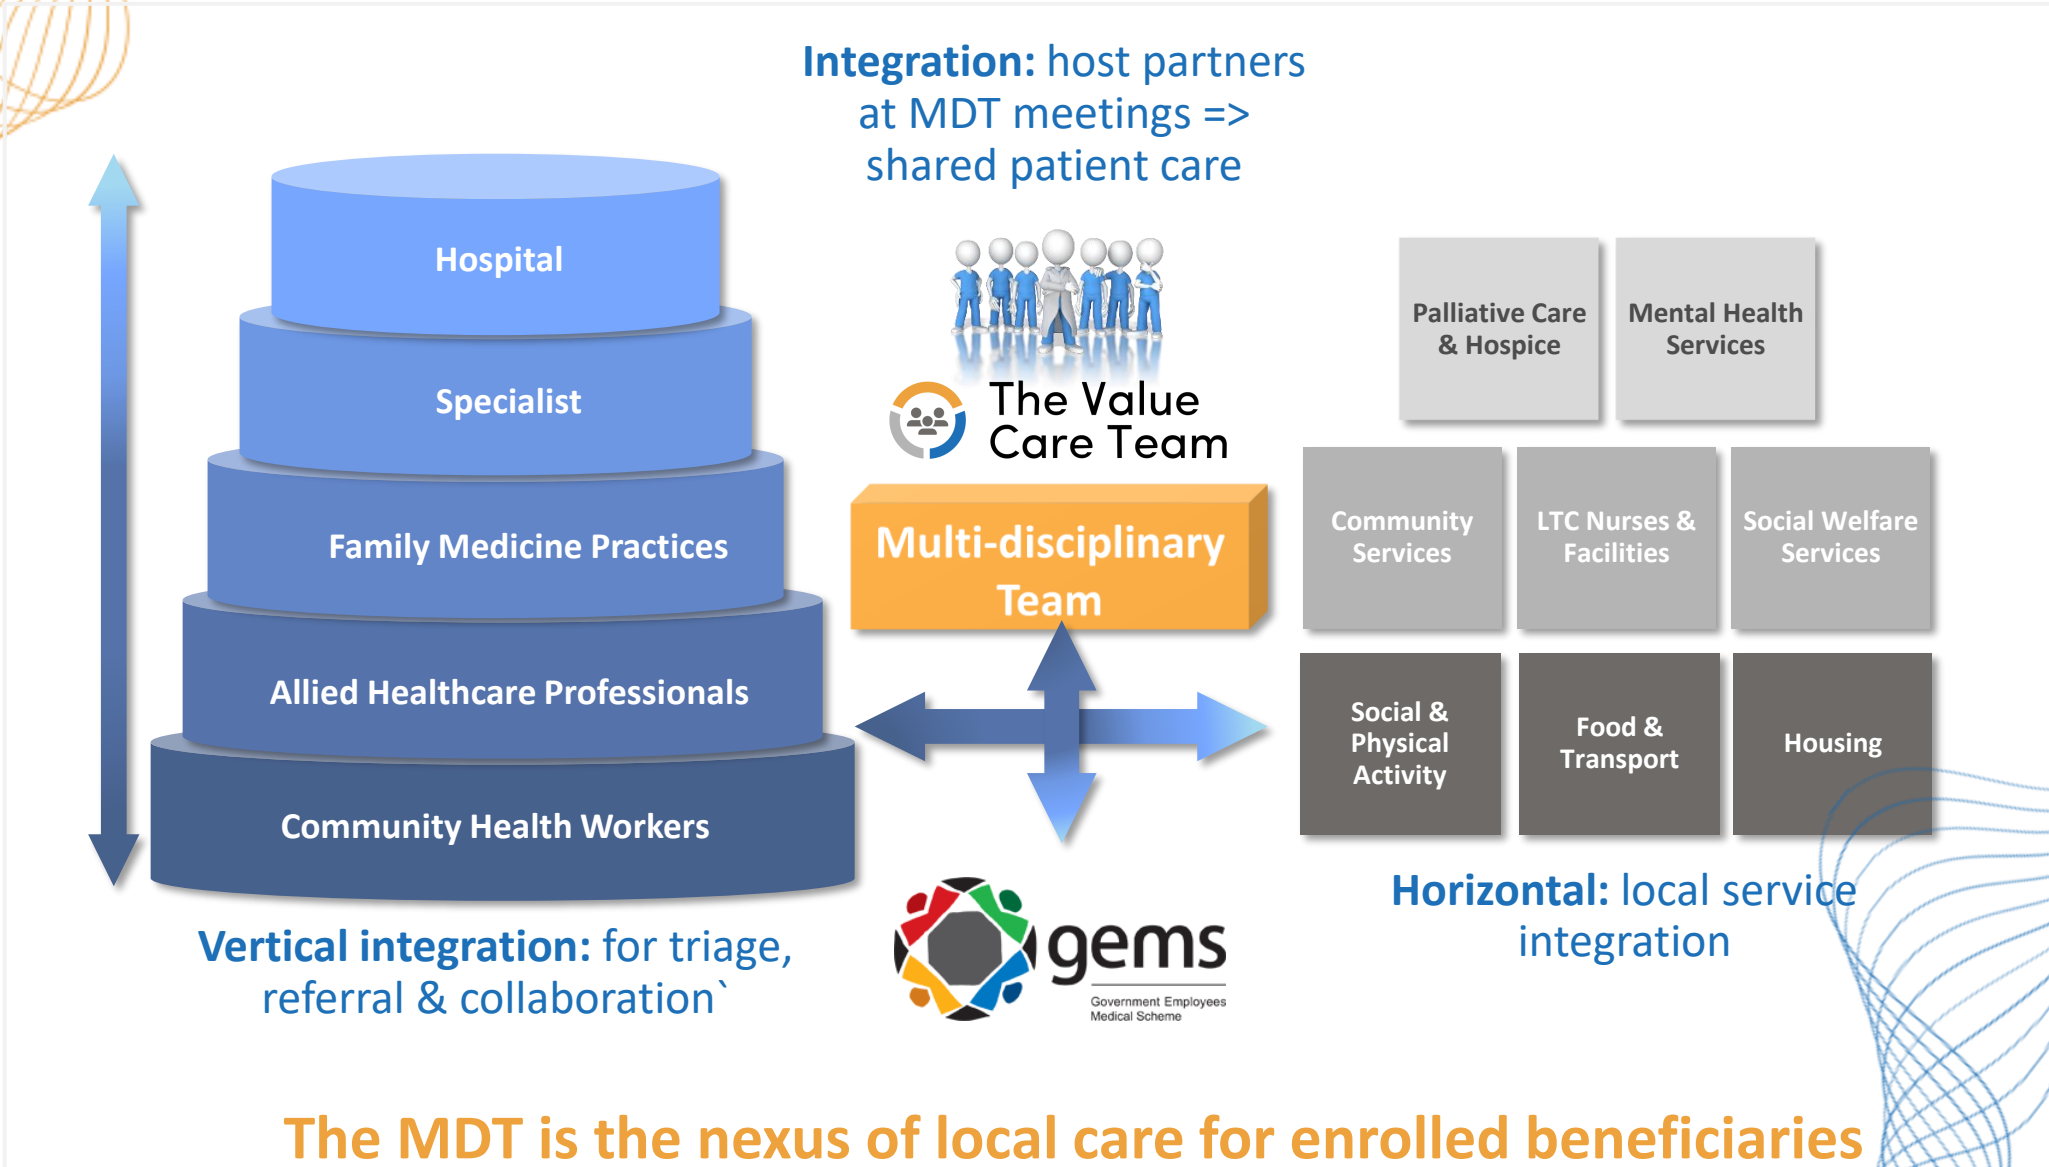

The Value
Care Team

Features	Characteristics
Collaborating Team	<ul style="list-style-type: none">• Shared support, improvement focus• Local system influence
LOCAL CHANNELS	<ul style="list-style-type: none">• Clinical referral arrangements• Social support network
Intelligent Care System & Reports	<ul style="list-style-type: none">• Proactive Care Plans per patient risk group• Outcome focus tasks
SCHEME VBC CONTRACT	<ul style="list-style-type: none">• Risk adjusted monthly global fee• plus significant outcome linked fee
