

INTRODUCTION TO BIOSTATISTICS SHORT COURSE

The Biostatistics Research Unit of the South African Medical Research Council will offer a course in basic biostatistics. The course will cover principles and concepts of statistical methods that are generally used and applied in the wider field of biomedical research including public health, epidemiology and clinical science. The course will be relevant to public health, clinical, epidemiological graduates and researchers who work in medical research units, academic departments or health services.

Topics include:

- Study designs in medical research
- Descriptive statistics
- Probability theory
- Hypothesis testing
- Linear and logistic regression
- Data management
