

INTRODUCTION TO LONGITUDINAL DATA ANALYSIS SHORT COURSE

*Limited
scholarships
available for
participants!*

The South African Medical Research Council will offer an intermediate course in biostatistics. The course will cover principles and concepts of longitudinal statistical methods that are generally used and applied in the wider field of biomedical research including public health, epidemiology and clinical science. The course will be relevant to public health, clinical, epidemiological graduates and researchers who work in medical research units, academic departments or health services.

Note: This course assumes basic knowledge of statistical modeling.

TOPICS INCLUDE:

Study designs in medical research

Overview of regression models

Mixed effects models

Survival analysis

Missing data

DETAILS

Dates: 16-19 March 2026

Venue: Pretoria, South Africa

RSVP: 16 January 2026

Registration cost: R3 750.00
