

Cape Town International
Convention Centre
1–4 September 2026

PRE-CONFERENCE METHODS WORKSHOP

Using ICD-11 and International Classification of Functioning (ICF) for injuries and measuring the burden

1 September 2026 | Cape Town International Convention Centre (CTICC)

Why Attend?

Injuries are a major contributor to mortality, disability and healthcare utilisation globally and in South Africa. Accurate injury classification, surveillance, and burden estimation are essential for informing prevention, policy, and service planning. This workshop will introduce participants to:

- the use of ICD-11 for injury coding and surveillance
- the International Classification of Functioning (ICF) for describing disability outcomes,
- concepts and methods for measuring injury-related burden
- practical applications for research, surveillance and policy development.

Who Should Attend?

- postgraduate students
- public health researchers
- injury prevention practitioners
- health information specialists
- clinicians and rehabilitation professionals
- policymakers and programme implementers.

Important Dates

Expression of Interest: 20 July 2026
Scholarship application: 20 July 2026
